Attorney Docket: 161,700-043

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the

application:

<u>Listing of the Claims</u>

1-18. (Cancelled)

19. (Original) A method for increasing cerebral blood flow in a patient,

comprising the steps of:

providing an elongate member having a proximal end, a distal end, and an

electrical stimulating device mounted on the distal end of the elongate member;

inserting the elongate member between lumbar vertebrae, low cervical vertebrae,

or high thoracic vertebrae into the subarachnoid space;

advancing the electrical stimulating device cephalad and positioning the electrical

stimulating device adjacent the brain stem; and

operating the electrical stimulating device to stimulate or inhibit nerve impulses

of the brain stem, thereby producing vasodilation in the cerebral vasculature, thereby increasing

cerebral blood flow.

20-53. (Cancelled)

Patent US 204

Attorney Docket: 161,700-043

- 54. (Previously Presented) The method of claim 19, further comprising the steps of measuring cerebral blood flow before and after the step of operating the electrical stimulating device.
- 55. (Previously Presented) The method of claim 54, further comprising the step of determining the increase in cerebral blood flow produced by operating the electrical stimulating device.
- 56. (Previously Presented) The method of claim 19, wherein the electrical stimulating device is positioned at a region adjacent the medulla.
- 57. (Previously Presented) The method of claim 19, wherein the electrical stimulating device is a GRASS stimulator.
- 58. (Previously Presented) The method of claim 19, wherein the electrical stimulating device is operated to produce electrical stimulation comprising a rectangular square pulse.
- 59. (Previously Presented) The method of claim 19, wherein the electrical stimulating device is operated to produce electrical stimulation comprising a pulse of 1 msec duration, 50 Hz, and 10 volts, with a stimulus train duration of 20 msec.
- 60. (Previously Presented) The method of claim 19, wherein the electrical stimulating device is operated to produce electrical stimulation comprising a pulse of 0.1-3 msec duration, 25-75 Hz, and 5-15 volts, with a stimulus train duration of 10-30 msec.
